Meeting notes for 11/25/2015

*Tiffany has a flight home in the morning and rescheduling the meeting was unsuccessful so we decide to hold this one without her.

~ Quick demo
- Show request and add friend feature (two people should be signed into app for this)
- Check In
- Map Display
- Bug in MVP (fixed)
  - Couldn't see friends who join after you
  - Routing issues - upon sign out, new user page
  - Issues for people off-campus? Not reproducible at the moment.

~Design Changes and Points of Discussion
*Should we still prevent users from scrolling off of MIT's campus in maps?
Originally said no because "creepy". But — what about frats across the river? And friends who live off-campus? And group meetings at Flour and such?

*Building the user table twice? What about people who try to register who aren't from MIT? How should we do verification?

*What sort of formal tests are you expecting? Do we only need to test the user model?

*UI design choices
